

Product name:

ComRip light support flexible cohesive bandage

Indications:

A cohesive bandage is particularly suitable for fixing wound compresses, splints and IV-systems to movable or round parts of the body. The windings adhere to each other, therefore fixing the bandage can be done easily and quickly and saves material. Elasticity and adhesion prevent the dressing from moving, ensuring that it remains in its place, even after wearing it for a long time.

Specifications:

ComRip Flexible cohesive bandages have a combination of a strength elastic general non-woven cloth and a latex coating which allows cohesive properties. We can use the bandage to identify them in light of different aims. It is very closely to the main brand 3M Vetrap and Andover coated Coflex products.

Properties

- Can be torn easily, very good unwind tension.
- Can be used in different thickness and at any body areas when need.
- Self-adhering, no need of clips or fasteners.
- Maintains the original size , do not constrict.
- Well flexible and breathable.
- Quick and easy removal by hand, with no sticky residue.

▶ Typical Applications

- Horse let care.
- Racehorse leg care.
- Hoof binding.
- Pets and veterinary care.
