

Product name:

Wound Powder

Indications:

For use on minor wounds, saddle sores, bites, cuts and scratches on horses. Wound powder is a blood coagulant and a dressing for use on minor wounds. It is also a useful drying formulation for minor wounds that are slow to repair. Wound powder may also be used for other livestock as a blood coagulant after dehorning, tail docking and dehorning. Aids in the prevention of proud flesh.

Direction for use:

Shake well before using. Hold nozzle 2 inches to 4 inches from wound. Squeeze container firmly, puffing powder freely over the entire surface of the wound. Use Wound Powder with or without bandages. Repeat application as often as necessary.
